Education

Cukurova University: Computer Engineering **Degree**: Bachelor of Engineering **Sept 2018 – Sept 2022**

Work Experience

Data Science Intern **June 2022 – Aug 2022**
Jotform *Ankara, Turkey*

- Analyzed data recorded from users using **Jupyter**, **Pandas**, **Matplotlib**, **FacebookProphet**.
- Performed statistical approaches on anomalies such as **Z-Score** by using **Scipy**.

ML Engineer / Data Scientist **Sept 2021 – June 2022**
NutzenTech *Istanbul, Turkey*

- Built Object Detection models using both **PyTorch** and **TensorFlow** to be used in drones.
- Data recorded from drone sensors were analyzed using **Pandas**, **Matplotlib** and **Seaborn** and defects were detected. Defect detection time has been reduced by approximately 7 days..

Machine Learning Intern **Dec 2020 – Apr 2021**
Apziva *Ankara, Turkey*

- Analyzed data using **Pandas / Matplotlib / Seaborn** and presented to the team in a report format.
- Built Machine Learning models using **Scikit-Learn** to predict if a candidate will be active or not.
- With the models created, the time candidate-checking takes was reduced by more than 25%.

Computer Vision Engineer **Sept 2020 – Apr 2021**
Cukurova Hydromobile Team, Cukurova University *Adana, Turkey*

- Built computer vision algorithms using **Python** and **OpenCV**.
- Built Object Detection algorithms using **YOLOv4** and **TensorFlow Object Detection API**.

Machine Learning Intern **May 2020 – Sept 2020**
CENGA R&D Team, Cukurova University *Adana, Turkey*

- Built a Deep Learning interface that trains various models using **TensorFlow** and **PyTorch**.

Technical Skills

- Languages: C/C++, Python, Java, SQL
- Libraries: TF, Keras, PyTorch, PySpark, Sklearn, Plotly, Matplotlib, Numpy, Pandas, Seaborn, OpenCV
- Tools: Jupyter, Git, Linux, CI/CD, Docker, Kubernetes, AWS SageMaker, MySQL, PostgreSQL

Projects

Forecasting Bus Demand: Training Deep Learning models and applying statistical approaches.

- Written in **Python**. Used **Scikit-Learn**, **Numpy**, **Pandas**, **Seaborn**, **Matplotlib, Tensorflow, Statsmodels, FProphet**.

Ames House Prices: EDA, Feature Engineering and training an XGB estimator for house prices.

- Written in **Python**. Used **Scikit-Learn**, **Numpy**, **Pandas**, **Seaborn**, **Matplotlib**.

U.S. Wildfire Analysis: Applying EDA, building and tuning an estimator to predict wildfire cause.

- Written in **Python**. Used **Scikit-Learn**, **Numpy**, **Pandas**, **Matplotlib**, **SQL**.

Ops-SpamDetector: Kubernetes deployment to predict spams.

- Written with **Python**. Model trained with **TensorFlow**.
- Built **Github Actions** to auto push docker to **Docker Repository**.

WGAN-GP Trainer: Customizable Wasserstein Generative Adversarial Networks.

- Written with **Python**. Built networks using **Pytorch**. Records logs with **Tensorboard**.

GRNN: Continuous data prediction using General Regression Neural Networks architecture.

- Written in pure **Python**. Built a GUI with **Tkinter**.
